## **METALRUSTGUARD**

What is MetalRustGuard?

MetalRustGuard is a non-toxic, protective wrap that prevents rust and corrosion on any type of metal. Because MetalRustGuard contains no VOC's or harsh chemicals in its' manufacturing, it can be used on the installation of any metal without harm to the user applying it or the environment it is placed in.

What is MetalRustGuard made of?

MetalRustGuard's base material is a hydrophobic polypropylene. The adhesiveness of the material is a proprietary wax formula that provides adhesion to the metal and prevents harmful contaminants in the atmosphere from corroding the metal on the inside. The wax is FDA approved and contains all non-toxic ingredients, making MetalRustGuard safe to be applied by hand.

How does MetalRustGuard keep metal corrosion free?

MetalRustGuard's ingredients create an impenetrable barrier to various weather and climate conditions including high humidity, extreme cold and marine environments from affecting its performance. Polypropylene's chemical properties do not absorb water, but acts like a water retardant pushing water away. The wax acts as a superior inhibitor against harmful atmospheric elements that cause corrosion.

What sizes does MetalRustGuard come in?

MetalRustGuard comes in roll form, in widths of 4.5", 6", 9", 12", 18", 36", 55" with 150 FT on each roll. For a nominal fee, the material can be perforated to tear away at a desired length for quicker application, maximizing coverage and minimizing waste. We also offer customizable and practically priced printing services of company logos on the material, which provides excellent branding and a professional packaging touch.

Does MetalRustGuard need any prep work or adhesives to work?

Not at all! MetalRustGuard is self-adhesive and only requires a dry surface to be used in its' application. Light pressure of the material to the metal prevents rust and corrosion without any other equipment needed. MetalRustGuard is ideal for shipping or storing metal for an extended period of time without worry of rust and corrosion.
